

PROJECT DESIGN PHASE - I

PROBLEM SOLUTION FIT

Smart Lender - Applicant Credibility Prediction for Loan Approval

PROBLEM SOLUTION FIT

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS <p>Customer are mainly the officials from Bank sector who will approve the loan to the customer. It may also include who loan lender,bank account user,and credit/debit users.</p>	6. CUSTOMER CONSTRAINTS CC <p>The Choices of solutions are limited by their budget, knowledge that required to use the solution, database access, database connectivity, etc.</p>	5. AVAILABLE SOLUTIONS AS <p>The current mechanism for evaluating the loan application is done by paperwork and based credit score.They require lot of effort and time but also not able to cover all the parameters to consider.</p>	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P <p>To validate whether the customer is eligibility for availing the loan scheme from bank. It may take long time check the eligibility manually.</p>	9. PROBLEM ROOT CAUSE RC <p>One of the major factor in increasing trend of banking sector that affect countries economy is credit system handled by banks.Increased rate of credit defaulter is a difficult task as credit risk evaluation is very crucial..</p>	7. BEHAVIOUR BE <p>Verify whether the loan requested person is eligible for loan based on the different parameter like person economic potential ,property support,financial performance,etc</p>	
Focus on J&P, tap into BE, understand RC	3. TRIGGERS TR <p>Financial situation of the user,Credit score rates,Low interest rates are also some of the trigger. Customers are triggered from the need to standardise the loan process and make their work more customer-friendly.</p>	10. YOUR SOLUTION SL <p>Based on the previous loan log of the bank's generated machine learning model which is used for evaluating the loan applicant eligibility. The proposed solution is the prediction of credit defaulters using classification algorithms such as Decision tree, Random forest and detect the credit risk evaluation. We use classification algorithms such as KNN and XGBOOST algorithms that forecast the loan defaulters and predict loan approval.</p>	8. CHANNELS of BEHAVIOUR CH <p>1. ONLINE Customers can easily predict their eligibility through a user interface. Proper Document verification Customer Background verification The applicant details are collected and cross verified. The verified data is given to the system for the evaluation.</p> <p>8.2 OFFLINE</p> <ul style="list-style-type: none">Submission of documentIt is time consuming processIt is complex.	Focus on J&P, tap into BE, understand RC
	4. EMOTIONS: BEFORE / AFTER EM <p>While evaluating the loan applicant the bankers struggle in deciding how to evaluate the loan applicant, which are the things to be considered and what are the criteria level needed to be checked. If the loan borrowers are not paying back the loan at specified intervals then the bank's are not able to generate income which is necessary for maintaining the bank and providing the interest for the depositors.</p>			
Identify strong TR & EM				Extract online & offline CH of BE
