Project Design Phase-I
Solution Architecture

Solution Architecture:

A complicated process with several sub-processes, solution architecture connects business issues with technological solutions. Its goals are to:

➢ Track down the most effective technological remedy for current company issues.

➢ Explain to project stakeholders the structure, traits, behaviour, and other features of the software.

➢ Specify the features, stages of development, and requirements for the solution.

➢ Offer guidelines for how the solution is created, managed, and delivered.
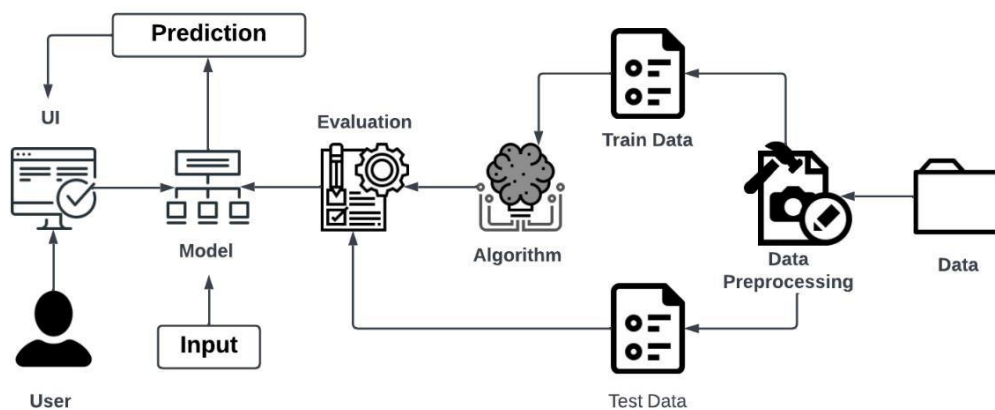

Example - Solution Architecture Diagram:

Figure 1: Architecture and data flow of the loan approval prediction using machine learning techniques.
